

1 Data and Hypothesis

For this study, I replicated data of the article titled as Government performance: General and Religious Demonatition by Comparative Study of Electoral System Module 5 published in 2021.

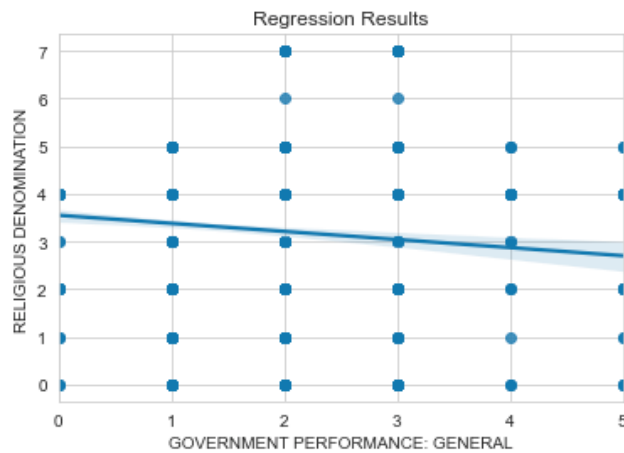

I employed the dataset and used Government performance: General as the independent variable and Religious Demonatition as the dependent variable.

H_1 : *As Religious Denomination increases in Turkey, there is no relationship between general Government performance appreciation.*

2 Empirical Evidences

Table 1 demonstrates that the findings are in line with the hypothesis.

Figure 1: GDP's Effect on Democracy Level

3 Empirical Evidences

As a result, as seen in the regression analysis, it is concluded that the conservative mass does not appreciate the general policies of the AKP government in Turkey. As a populist approach, it was supposed that the policies of the AKP government to convene the conservative mass politically were actually unsuccessful in a way.
